📍 Based in France | Open to Relocation

SUMMARY

Android Software Engineer with **4+ years of experience** building native Android applications for fintech and consumer-facing products, from greenfield development to production performance and reliability. Strong background in Kotlin, Java, Jetpack Compose, Android SDK, modular MVVM/MVI, Clean Architecture, Kotlin Coroutines and Flow, and REST/GraphQL API integration. Collaborates with product, design, backend, and QA teams to deliver maintainable features, offline-first experiences, and reliable releases.

WORK EXPERIENCE

Senior Android Software Engineer, Hamsaia

Apr 2026 – Present | Sweden (Remote)

- Independently built Hamsaia's Android application from scratch and **launched it on Google Play within the first four months**, creating a cross-border commerce experience that allows customers abroad to purchase and have everyday essentials delivered to their families.
- Defined the mobile technology stack and designed a **modular Kotlin Multiplatform codebase** using Kotlin, Jetpack Compose, Clean Architecture, and MVVM/MVI, with shared layers supporting future iOS delivery.
- Delivered **10+ production screens and user flows**, including a shopping cart, deeply nested product categories, and a WebView-based checkout and payment integration with the existing commerce platform.
- Refactored the beta codebase to reduce duplicated logic and **improve build performance by approximately 10%**; implemented logging and crash monitoring and resolved closed-testing issues that **reduced observed crash incidence by approximately 5%**.
- Collaborated directly with the backend lead, designer, and management in two-week sprints, **owning Android technical decisions and release readiness**, API integration reviews, and post-launch issue resolution.

Android Software Engineer, Gandom Company

Sep 2023 – Dec 2025 | Tehran

- Developed and modernized **four production Android applications** for a high-volume brokerage ecosystem serving **~5 million users and handling 4–6 million daily financial transactions, API requests, and market-data operations**.
- Modernized two legacy Android applications by migrating Java/XML, MVP, and outdated networking implementations to Kotlin, Jetpack Compose, MVVM/MVI, Clean Architecture, Retrofit, Coroutines, and Flow, while addressing performance, battery-consumption, maintainability, and security issues.
- Delivered measurable improvements across these modernization initiatives, achieving **approximately 2× faster application performance, 40% fewer crashes, and a 20% reduction in application size**.
- Independently designed and built a production-grade investment-fund analytics application from scratch, delivering **20+ feature areas within four months** using Kotlin, XML/ViewBinding, feature-based MVVM and Repository architecture, Coroutines, Retrofit/OkHttp, Room, and Paging 3.
- Developed **six interactive financial chart types and a configurable market treemap** using MPAndroidChart and AnyChart, alongside fund, index, and instrument comparison, advanced search/filter/sort workflows, watchlists, bookmarks, paginated market content, and exact-time note reminders.
- Stabilized a legacy video-streaming application by **resolving two critical production defects** that caused downloaded content to be lost and streaming sessions to crash; redesigned its caching and download handling and refactored legacy modules using modern Android technologies.
- Built another Android application from scratch for a complex **insurance-linked investment platform**, implementing its architecture and financial workflows with Kotlin, Jetpack Compose, modular MVVM, and modern Android components.
- Collaborated within a multidisciplinary engineering team through two-week sprints, contributing to architecture decisions and code reviews while working with automated testing, Room-based caching, Crashlytics, Sentry, CI/CD pipelines, application security, and Google Play releases.

Android Developer Intern (Full-time), TrueLearn

Mar 2023 – Aug 2023 | Tehran

- Designed and built an **end-to-end e-commerce Android application** with Jetpack Compose, delivering product discovery, category browsing, shopping-cart, checkout and address, authentication and profile, theming, and RTL/localization flows.
- Integrated **15 REST API endpoints** using Retrofit and OkHttp, structuring asynchronous data flows with repository-based MVVM, Hilt, Kotlin Coroutines, StateFlow, and Compose Navigation.

- Implemented a **reactive Room-backed shopping cart and encrypted DataStore session storage**, supporting persisted basket state, authentication tokens, localization preferences, and secure local data handling.

Android & iOS Developer, Tagfaa

Sep 2022 – Mar 2023 | Shiraz

- Designed and developed a private **Android and iOS enterprise application supporting a customer base of 300,000+**, deploying both native platforms for a customer-service portal.
- Built the Android application using Kotlin, XML/ViewBinding, feature-based MVVM and Repository architecture, Coroutines, Retrofit/OkHttp, and Paging 3, while developing the corresponding iOS application with Swift, SwiftUI, MVVM, and async/await.
- Delivered **secure account management and real-time shipment tracking**, including authentication, password recovery, profile and session management, paginated shipment history, dynamic filtering and search, detailed status timelines, and financial visualizations.
- Implemented a **cross-platform push-notification and multimedia system** using Firebase Cloud Messaging, ExoPlayer, AVKit, WebView, and SVG rendering, including token synchronization, unread counters, notification-to-content navigation, and consistent functionality across Android and iOS.

Software Engineer Intern, uMind

Mar 2022 – Sep 2022 | Shiraz

- Contributed full-time to an AI-assisted mental-health platform serving **approximately 500 users**, developing mood- and habit-tracking workflows in Flutter for recording emotional states, routines, and desired activities.
- Integrated mobile workflows with a **trained conversational model** that generated personalized guidance based on users' interactions and tracked activities.
- **Transitioned from Flutter development to backend engineering**, implementing REST APIs, authentication, database models, business logic, and administrative workflows using Django REST Framework, PostgreSQL, and MongoDB while collaborating with Flutter, backend, and AI engineers.

SKILLS

Languages & Cross-Platform: Kotlin, Java, Kotlin Multiplatform (KMP)

Android & UI: Android SDK, Jetpack Compose, XML Views, Android Jetpack, Lifecycle, ViewModel, LiveData, SavedStateHandle, ViewBinding/DataBinding, Navigation Compose, Material 3, WorkManager, Foreground Services, BroadcastReceiver, Adaptive UI, Accessibility

Architecture: MVVM, MVI, MVP, Clean Architecture, Modularization, Multi-module Architecture, Dependency Injection, Hilt, Koin

Concurrency, Networking & Data: Kotlin Coroutines, Flow, RxJava, Retrofit, OkHttp, Ktor, REST APIs, GraphQL, WebSockets, Server-Sent Events (SSE), Room, DataStore, Kotlinx Serialization, Moshi, Gson, Offline-first Architecture

Testing: Unit Testing, Integration Testing, UI Testing, JUnit, MockK, Mockito, Espresso, Compose UI Testing, TDD, Test Coverage

Build, CI/CD & Release: Gradle Kotlin DSL, Version Catalogs, Git, GitHub Actions, GitLab CI, Jenkins, Google Play Console, Android App Bundles (AAB), App Signing, Build Variants

Security: Android Keystore, EncryptedSharedPreferences, Secure Storage, SSL Pinning, OAuth 2.0, JWT, Biometric Authentication, ProGuard/R8

Performance & Monitoring: Android Profiler, Perfetto, ANR Investigation, Memory Leak Analysis, Firebase Crashlytics, Firebase Analytics, Sentry

EDUCATION

Bachelor of Science in Computer Science and Engineering, Shiraz University

Nov 2020 – Jan 2025 | Shiraz

TEACHING & LEADERSHIP EXPERIENCE

Teaching Assistant & Android Workshop Instructor, Shiraz University

Sep 2021 – Sep 2025 (Multiple Appointments)

- Served as Teaching Assistant and Head Teaching Assistant across Android Programming, Software Design, HCI, OOP, and foundational programming courses, **supporting and mentoring 100+ students** through technical labs, guided coding sessions, and project reviews.
- **Led small teams of teaching assistants and owned the design and coordination of assignments, programming exercises, course projects, and examinations**, while providing individual technical support to students.
- Delivered **two Android and Kotlin workshops**, including a **12-hour workshop for approximately 70 participants**, covering Kotlin fundamentals, modern Android development, and Jetpack Compose.
